

# We make safe and sound work.\*

\* **Safety doesn't happen by accident.** At Eaton, we're continually engineering and implementing safer products and processes, to keep customers and employees – yours and ours – out of harm's way.

## AT WORK

**Every 30 minutes of the workday, a worker suffers an electrically-induced injury that requires time off to recover.** Eaton products, services and training are designed to help keep people safe, so they can focus on what really matters.

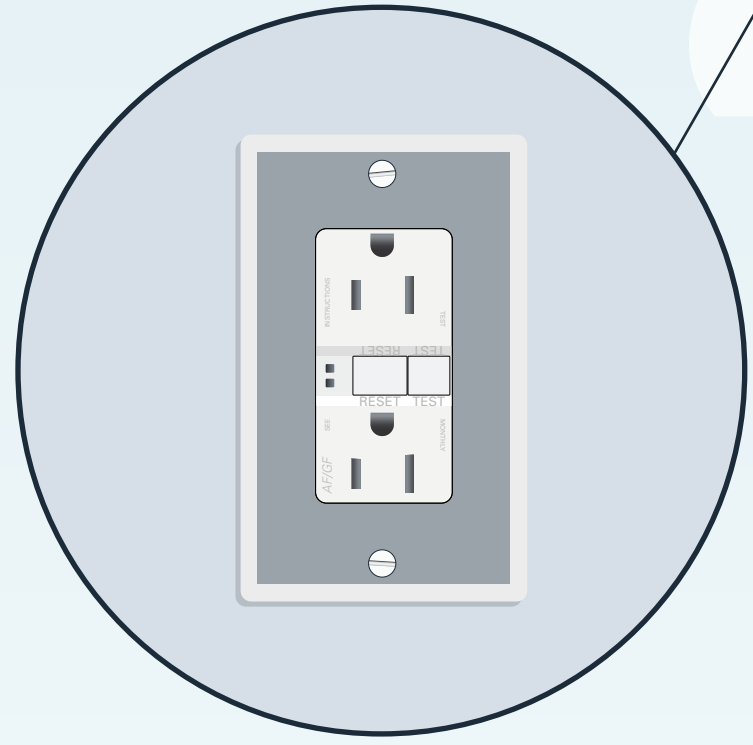

### Walking the walk

Our "I Choose Zero" safety program has helped us reduce incidents year over year and reinforces the importance of safe work practices for all employees.

## AT HOME

**In Europe, 20 to 30% of all domestic fires have an electrical source.**

Around the clock, Eaton residential electrical products are at work, keeping families safe. You'll also find us on neighborhood streets, keeping school buses, fire trucks and rescue vehicles available.

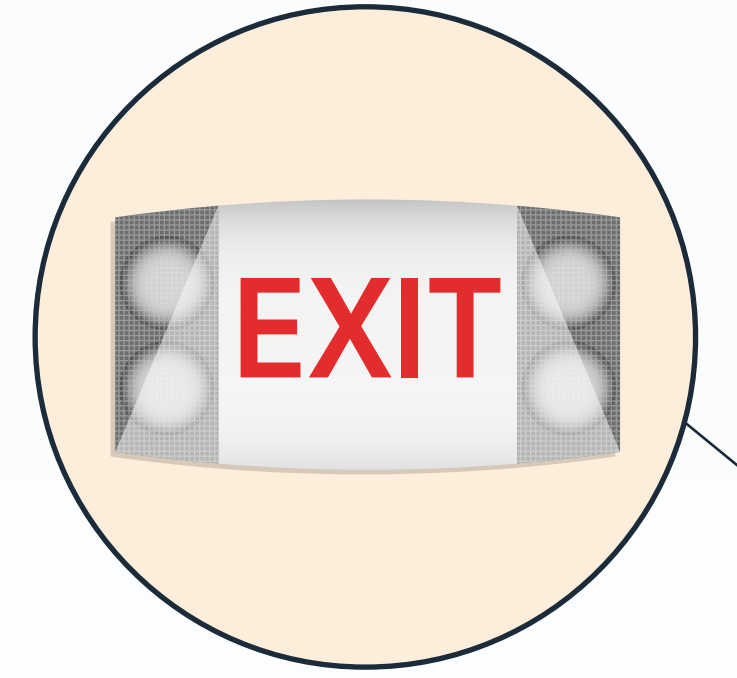

### Circuit protection

From meters and load centers, to circuit breakers and outlets, our residential products keep electricity flowing safely throughout every room in your home.

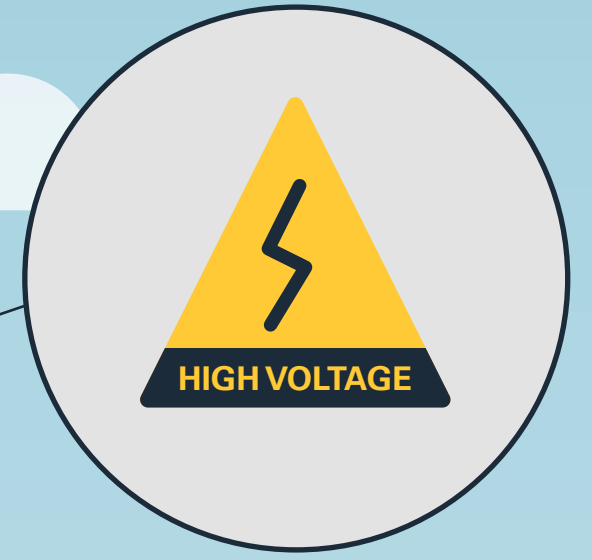

## AT PLAY

**Over the last 15 years, spending on personal consumption has doubled to \$12.3 trillion.** And people are spending less on goods, and more on experiences. But whether you unwind with a weekend getaway or a glass of wine at home, we have a hand in making your plans go exactly as planned.

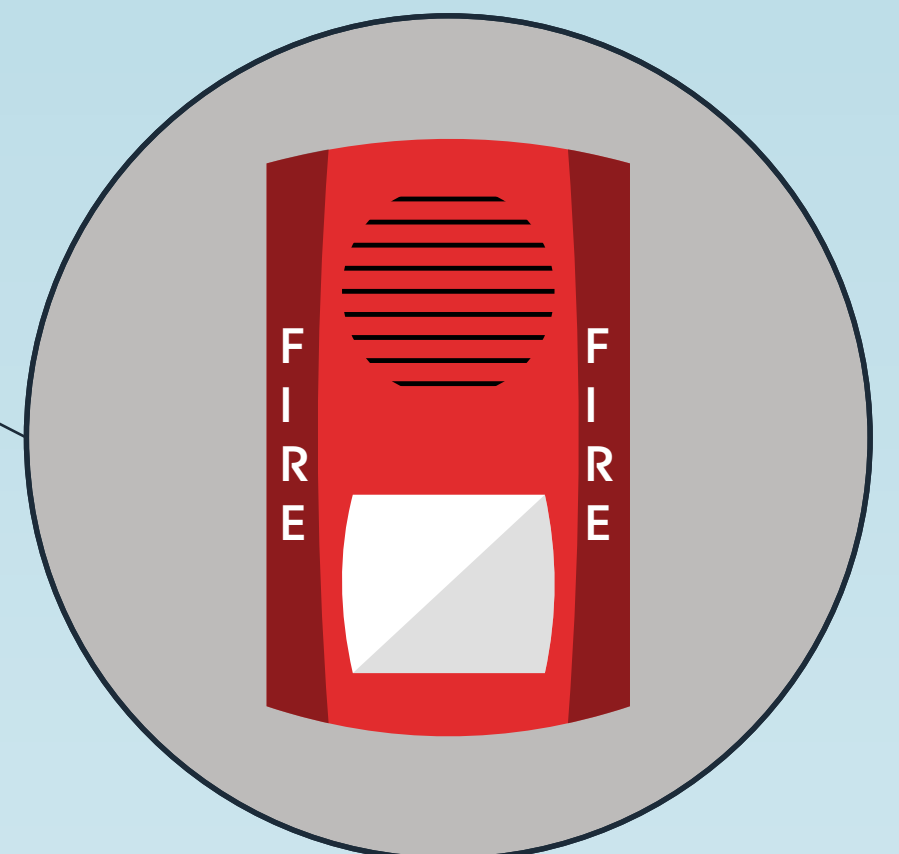

### Emergency lighting systems

Safely evacuating tens of thousands of fans is no small task. But that's exactly what our emergency lighting systems do. From the backup power to the lights and alarms, we design, engineer and implement sophisticated, reliable, life-saving systems.

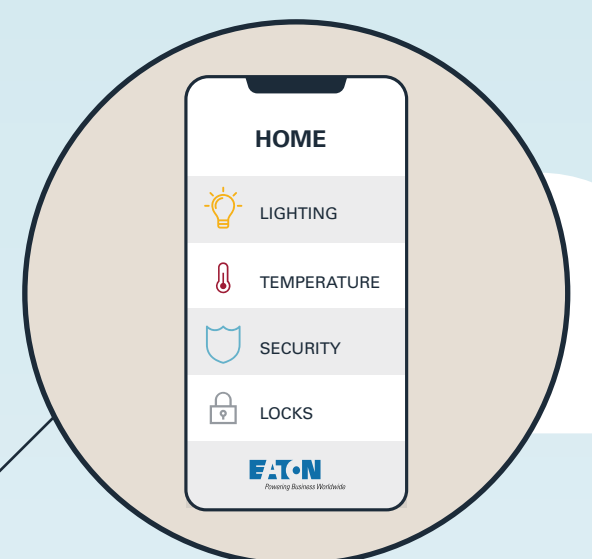

### Arc flash safety

With training on everything from arc flash hazard analysis to compliance, to a full range of products, we offer the industry's most comprehensive suite of arc flash-related products and services.

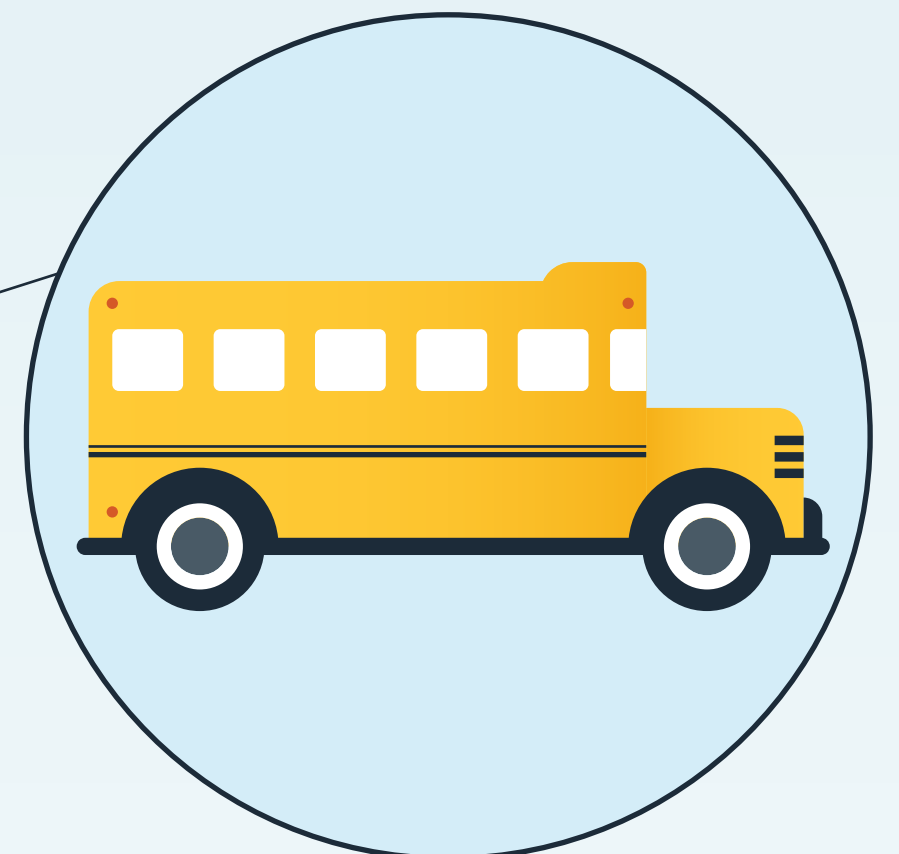

### Mass notification systems

Our systems keep students, workers and families safe. From campuses like the University of Central Florida, to facilities like the Peru LNG natural gas plant, to entire counties like Arlington, VA.

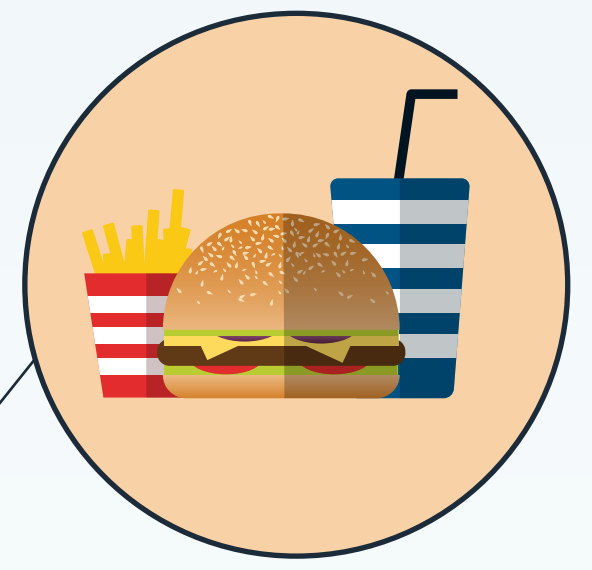

### Home automation hub

Our hub turns smartphones into a remote control for the entire home. With a single app, homeowners can access their lighting, security system, door locks and more – from anywhere in the world.

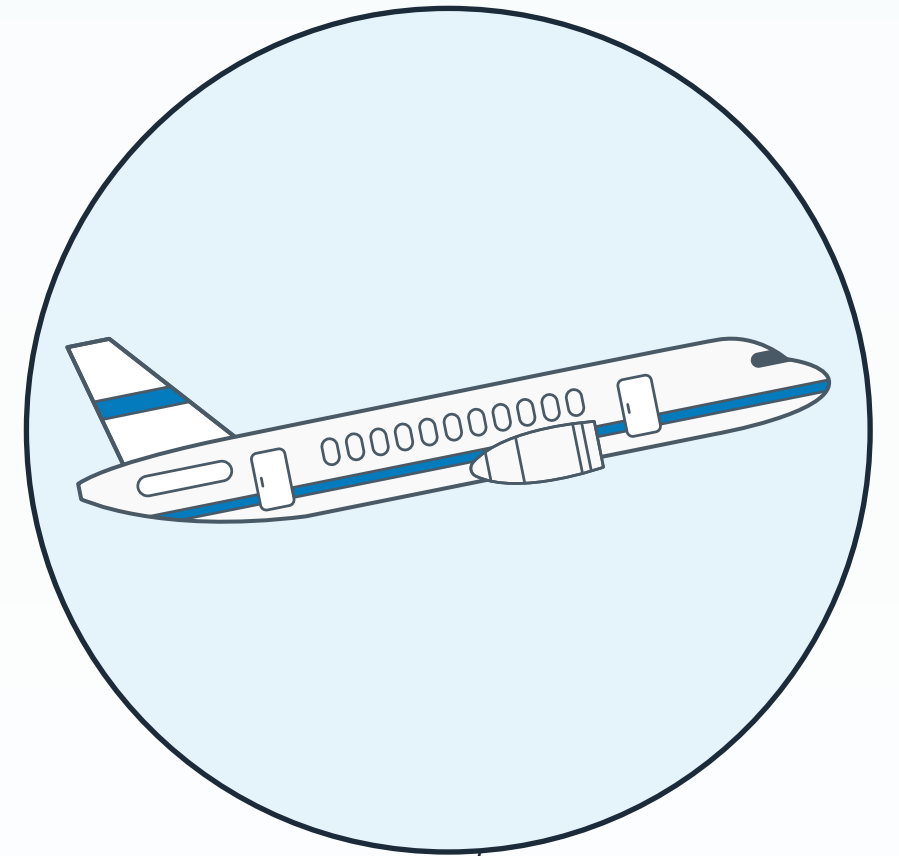

### Vehicle transmissions

School districts and first responders rely on Eaton transmissions to get the job done. You'll find them in school buses, fire trucks and rescue vehicles – where reliability can't be compromised.

### Food & beverage

Whether it's baked, brewed, or bred, our filtration systems and electrical equipment for processing and packaging help get it from the source to your shelf, safely and deliciously.

### Air travel

On the tarmac and in the air, Eaton technologies enable hundreds of tasks that make air travel possible. From lighting the runways and terminals, to manufacturing the hydraulics in the landing gear and onboard motion control systems, we're there from 0 to 30,000 feet.

# We make what matters work.\*

\* From the office to our home and everywhere in between, power is a fundamental part of our everyday lives. And we're here to make sure it works – safely, reliably, efficiently and sustainably. Because that's what matters. To learn more about what we do, visit [Eaton.com/whatmatters](http://Eaton.com/whatmatters).
